Missouri Seeks to Rise from Bottom Half of National Preschool Rankings

National report says it's a "time to choose," as states have bounced back unevenly from the pandemic when it comes to preschool enrollment and quality

NEW BRUNSWICK, N.J. - A new national report released today ranks Missouri 39th in the nation for preschool enrollment for four-year-olds and 30th for three-year-olds. The state ranked 33rd for preschool spending.

The National Institute for Early Education Research (NIEER) today released its annual *State of Preschool* report, which tracks preschool enrollment, funding, and quality across states. The 2023 *State of Preschool Yearbook* found that, in the 2022-2023 school year:

- Missouri served 7% of four-year-olds and 1% of three-year-olds in state-funded preschool, for a total enrollment of 6,375 (an increase of 1,135 from the prior year).
- State spending totaled \$27,625,495, down \$207,515 (1%), adjusted for inflation, since last year.
- State spending per child equaled \$4,333 in 2022-2023, down \$978 from 2021-2022, adjusted for inflation.
- Missouri met 4 of 10 research-based quality standards benchmarks for minimum quality recommended by NIEER.

"Our report on the 2022-2023 school year found that Missouri leaders had work to do to improve preschool enrollment, funding, and quality. We applaud the increased funding for preschool appropriated by the state legislature that has the potential to greatly increase preschool access," said **W. Steven Barnett, Ph.D., NIEER's senior co-director and founder**. "We encourage Missouri to make choices that will provide access to high quality preschool for more children and families and also pay teachers adequately in order to provide more children with the early education experience they deserve."

Nationally, the report finds that this is a critical moment for preschool. The nation has emerged, albeit unevenly, from the COVID-19 Pandemic. States are poised to make new progress toward serving more three- and four-year-olds in high-quality, full-day preschool programs. How each state chooses to move forward – and whether the federal government helps – will determine how much real progress is made. Most states have not committed to serving all children, and even those states that have often fall short. Most states need to increase funding per child substantially to enable providers to meet minimal standards for a high-quality, effective program.

During the 2022-2023 school year, states enrolled over 1.63 million children in preschool, marking a 7% surge compared to the preceding year. Preschool enrollment reached 35% of 4-year-olds and 7% of 3-year-olds, with state expenditures reaching \$11.73 billion—an 11% increase from 2021-2022 when adjusted for inflation. Notably, state spending per child surpassed \$7,000 for the first time. However, despite this notable progress, most states still fell short of their pre-pandemic preschool enrollment. While several states made strides towards achieving universal preschool access, six states persisted in not allocating any funding for preschool programs.

"With the pandemic in the rear view, it is time for states to choose whether they are going to support high-quality preschool and how," said **Allison Friedman-Krauss, Ph.D., the report's lead author**. "Will states commit to serving all four-year-olds? Will states serve both three- and four-year-olds? Will states make the investments needed to ensure that programs are effective? Will states support a mixed-delivery model for preschool incorporating both existing child care programs and public schools? Will states provide a full school-day option for all families who want it? How will states recruit, support, and retain preschool teachers? These decisions will impact millions of children for years to come."
